Project Development Phase

Model Performance Test

Date	26-09-2026
Team ID	23KD1A4220
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	10 Marks

Model / System Performance Testing:

Project team shall document the system summary, functional accuracy, performance observations, and user acceptance results for the diagnostic center portal. Enter measured values and insert screenshots from the actual ServiceNow instance before submission.

S. No.	Parameter	Values / Project Details	Screenshot / Evidence
1.	System Summary	Medical Diagnosis Center by Service Portal is developed on ServiceNow to manage patient registration, diagnostic test browsing, appointment booking, sample-processing updates, and secure laboratory report access. Staff manage records and update workflow statuses through ServiceNow.	
2.	Functional Accuracy	Patient registration and required-field validation – verify with actual test results. Diagnostic test catalog display – verify test names and details. Appointment submission and record creation – verify booking is saved correctly. Sample status update – verify lab staff updates are reflected. Report access control – verify only authorized users can view or download reports.	
3.	Performance Testing	Portal page loading time: record measured average (target example: under 5 seconds). Appointment submission response: record measured average (target example: under 3 seconds). Record retrieval time: measure when opening patient, appointment, and test records. Concurrent-user behavior: test with the number of users available in your instance and note any errors or delays.	
4.	User Acceptance Testing	Validate that a patient can register, select a diagnostic test, book an appointment, and check its status. Validate that lab staff can update sample/test status and attach a report, and that the patient can access the report with appropriate permissions. Record actual Pass /	

		Fail results.
