Project Design Phase

Proposed Solution – Medical Diagnosis Center

Date	25 September 2026
Team ID	
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	2 Marks

Proposed Solution Template:

The proposed solution for the Medical Diagnosis Center is implemented using the ServiceNow Service Portal to simplify diagnostic test booking, appointment tracking, sample processing, and report access.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Patients may face difficulty finding diagnostic test information, booking appointments, tracking the progress of their tests, and accessing reports. Diagnostic center staff may also need a centralized system to manage tests, bookings, patient details, and results.
2	Idea / Solution description	Develop a ServiceNow-based Medical Diagnosis Center Service Portal where patients can register, view available diagnostic tests, book appointments, track booking and test status, and view or download reports. Lab technicians can update sample and test results, while administrators can manage tests, patients, appointments, and reports.
3	Novelty / Uniqueness	The solution brings patient services, diagnostic test booking, status tracking, lab processing updates, and report access into one ServiceNow portal. Role-based access separates patient, lab staff, and administrator activities, while workflows and notifications help keep users informed.
4	Social Impact / Customer Satisfaction	The portal can reduce manual effort, make diagnostic services easier to access, provide clearer appointment and test-status information, and give patients convenient access to their reports. A centralized process can also improve coordination between patients and diagnostic center staff.
5	Business Model (Revenue Model)	The diagnostic center can continue to charge customers for diagnostic tests and related services. The ServiceNow portal acts as the digital service platform for managing

		bookings and service delivery. The project does not define a separate subscription or platform revenue model.
6	Scalability of the Solution	The solution can be extended by adding more diagnostic tests, users, staff roles, portal pages, workflows, notifications, and reports. Additional integrations can be added later when required, while ServiceNow tables and role-based access can support expansion of the application.
