Project Design Phase
Solution Architecture

Date	25 September 2026
Team ID	
Project Name	Medical Diagnostic Center by Service Portal
Maximum Marks	4 Marks

Solution Architecture:

The Medical Diagnostic Center by Service Portal is a ServiceNow-based application that connects patients, reception staff, laboratory technicians, and administrators through one portal. It supports patient registration, diagnostic test browsing, appointment booking, sample processing, and viewing or downloading reports.

Architecture components and flow:

Patient / Reception Staff	Service Portal UI (HTML, CSS, Client Scripts)	ServiceNow Application Layer (Portal & Access Controls)
Book tests / appointments	Submit and view requests	Business Rules / Flow Designer
Laboratory Technician	Update sample & test status	Diagnostic Test, Appointment,

		Patient & Lab Result Records

Users → Service Portal → ServiceNow logic and records → Report access

Main solution functions:

- Patient registration and secure role-based access.
- Diagnostic test catalog and appointment booking.
- Sample collection and laboratory status updates.
- Lab result entry and report viewing or downloading.
- Administrator management of users, tests, and records.

Data is stored in ServiceNow tables and report files are managed using platform attachments. External payment integration is not specified in the project details.
