Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	2 Marks

Customer Problem Statement:

Diagnostic centers often struggle to manage patient registrations, test bookings, sample processing, and report delivery through manual methods. Patients may experience long waiting times and inconvenience while booking diagnostic tests and appointments.

Patient details, appointment records, test statuses, and laboratory reports may be maintained separately, making it difficult for staff to track the entire diagnostic process. Patients may also need to contact the center repeatedly to check whether their reports are ready.

To address these challenges, the Medical Diagnosis Center by Service Portal (ServiceNow) provides a centralized digital platform for managing diagnostic services. It enables patients to register, book tests and appointments, track test status, and securely access reports online. Lab staff can manage samples and update test results, while administrators oversee operations through the portal.

This solution aims to reduce manual work, improve record management, minimize delays, and provide patients with a smooth and convenient diagnostic service experience.
